Surgery

SIRS (Systemic Inflammatory Response Syndrome)

Adrian P. Ireland

aireland@eircom.net

Academic RCSI Department of Surgery, Beaumont Hospital

SIRS

- Definition of SIRS/MOF etc
- Causes
- Why is it important?
- Mortality of SIRS/Sepsis
- Cell and organism response to stress
- Players (Molecules, Cells)
- Clinical Stages
- Treatment

Definition

The Systemic Inflammatory Response Syndrome

- Final common pathway of many insults
- High Mortality

Definition - ACCP/SCCM (1992)

Presence of two or more of the variables below

Variable	Abnormality	
Temperature	Less than 36 Centigrade	
	More than 38 Centigrade	
Pulse Rate	More than 90	
Resp Rate	More than 20	
	pCO_2 less than 4.3 kPa	
White Cells	Less than 4	
	More than 12	
	or More than 10% immature forms	

More definitions

- Infection
- Sepsis
- Severe Sepsis
- Septic Shock

Infection - Sepsis

Infection

Inflammatory response to the presence of microbes or invasion of normally sterile tissue by microbes

Sepsis

SIRS due to a microbial origin

Severe Sepsis - Septic Shock

Severe Sepsis

Sepsis with organ dysfunction, hypoperfusion or hypotension

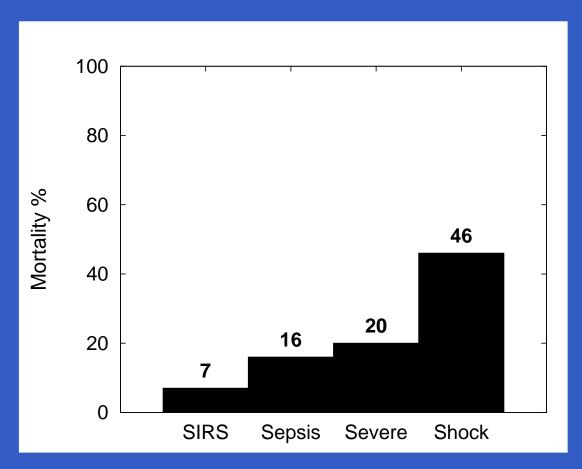

Septic Shock

Severe Sepsis with hypotension despite adequate fluid resuscitation

Causes of SIRS

- Infection
- Trauma
- Burns
- Pancreatitis
- Sepsis
- Ischaemia-Reperfusion
- Hypovolemic or Haemorrhagic shock

Mortality in SIRS/Sepsis

Stepwise increase in mortality

Rangel Frausto et al JAMA. 1995 273:117-23

Why is it important

- Advances in care of surgical patient are not sufficent to date
- Modulation of SIRS possible direction

Advances in Care of Surgical patient

- Pre op preparation; Rapid Transportation, Parmedical
 Care, ATLS vs Scoop and Run
- Better Surgery; Minimally Invasive, Damage Control, Planned re-op, Volume and Outcome data
- Better Anaesthesia
- Prediction of outcome; Scoring Systems, Genotypic
 Markers
- Critical care; ICU specialist, Organ systems support

Modulation of SIRS?

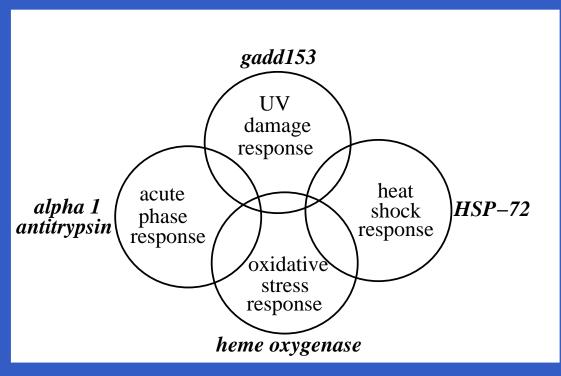

Holy Grail

- Activated Protein C
- Enteral feeding
- Immuno-nutrition

Review of the Basics

- Cellular response to stress
- Organism response to stress
- Special cells
- Special molecules

Cellular response to stress

Critical Care Med 22(6):901-3, June 1994

- Heak Shock
- UV damage
- Oxidativedamage
- Acute phase

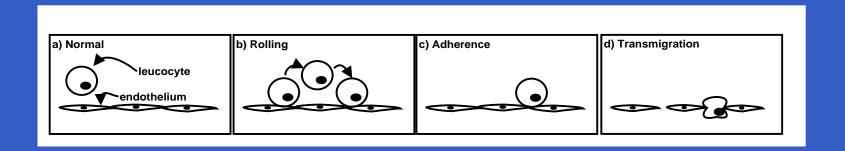

Organism response to stress

- Special cells
 - Leucocyte
 - Endothelial cell
- Special molecules
 - Inflammatory Mediators
 - Cytokines (pro, anti and mixed effect)

Role of the Leucocyte

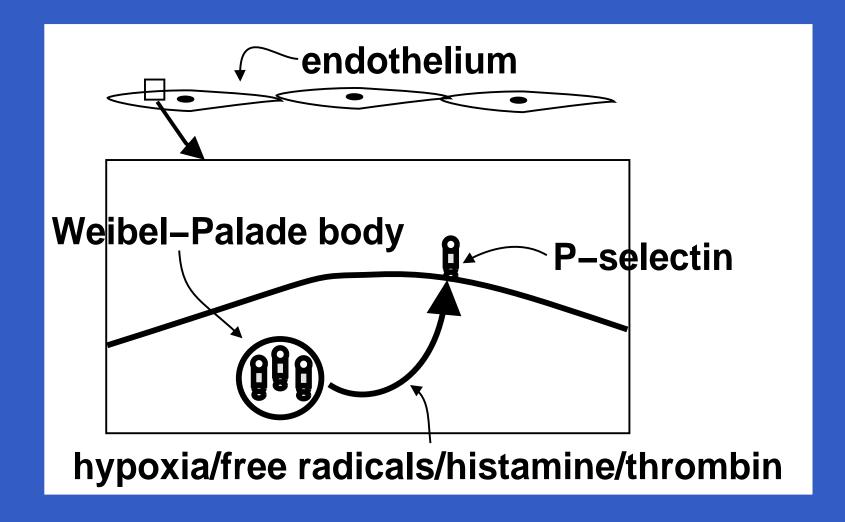

- Leucocyte endothelial interactions
- Reactive Oxygen Species
- Release of Active Agents
- Physical Occlusion of capilleries

Leucocyte-Endothelial Interactions

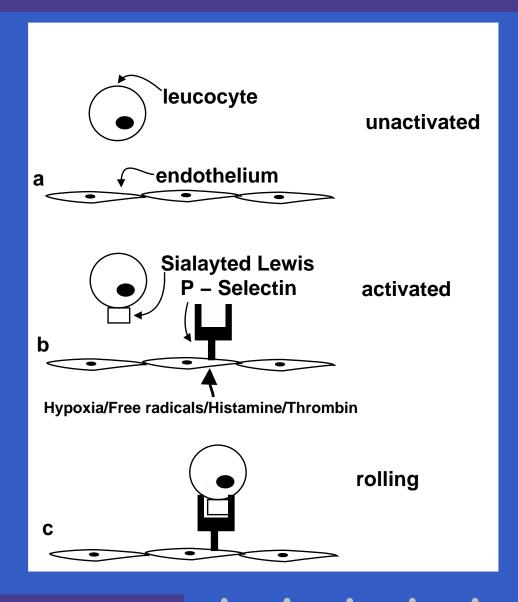

- Rolling
- Adherence
- Transmigration

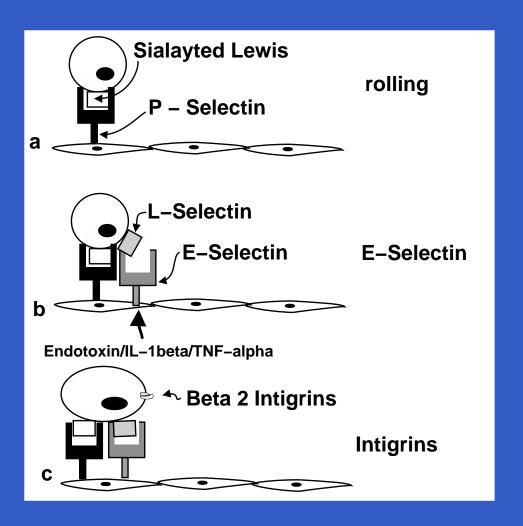

Rolling - P-selectin

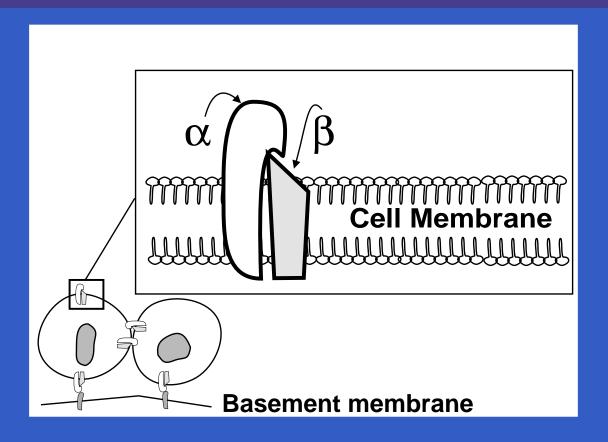

Rolling

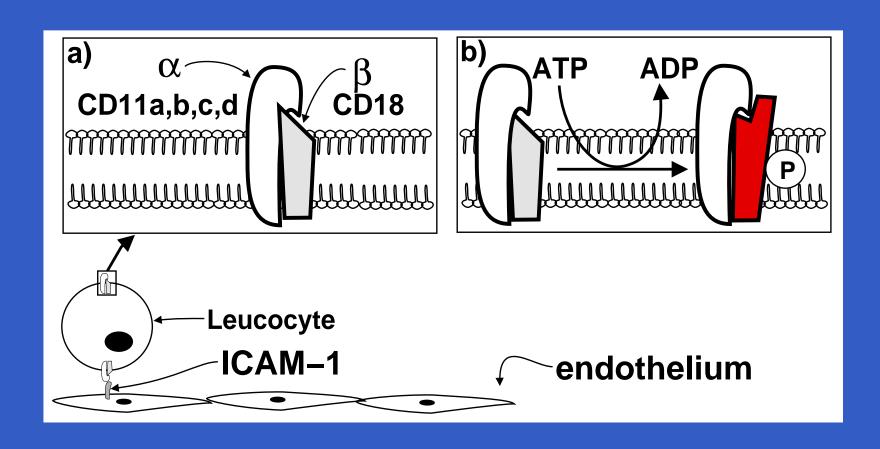

Adherence

Integrins

Beta2 - Integrins

Transmigration

- Integrin to ICAM-1 binding
 - Block by Ig against CD11/CD18
 - Block by Ig against ICAM-1
- Integrin to VCAM-1 binding
- L and E Selectins do not play a role
- Leucoctye extends pseudopodia and migrates into interstitium

Role of the Leucocyte - Reactive Oxygen Species

- Leucocyte endothelial interactions
- Reactive Oxygen Species
- Release of Active Agents
- Physical Occlusion of capilleries

Reactive Oxygen Species

- How they cause damage
- Where they come from

Reactive Oxygen Species - How they damage

- Paritally empty outer shell (reactive++)
- DNA nicking
- Lipid membrane peroxidation
- Protein crosslinking and degredation
- Attraction of inflammatory cells
- Activation of inflammatory cells
- Promotion of leucocyte-endothelial interaction

Reactive Oxygen Specis - Parenchymal cells

$$Hypoxanthine \xrightarrow{Xanthine Oxidase} O$$

- Last short period
- Dependent on supply of Hypoxanthine

Reactive Oxygen Specis - Leucocyte

$$O_2 \xrightarrow{\text{NADPH Oxidase}} Superoxide$$

$$Superoxide^{\cdot} + H_2O_2 + Cl \xrightarrow{\text{Myeloperoxidase}} HypochlorousAcid$$

- NADPH Oxidase membrane bound
- Production unlimited provided oxygen available
- Myeloperoxidase stored in granules

Role of the Leucocyte - Release of Active Agents

- Leucocyte endothelial interactions
- Reactive Oxygen Species
- Release of Active Agents
- Physical Occlusion of capilleries

Leucocyte - Active Agents

- LTB4 (Potent chemoattractant, adhesion, transmigration)
- TNF- α (Pro inflammatory cytokine)
- Elastase, Collagenase, Gelatinase (Hole in BM, intestitial matrix, transmigration)

Organism response to stress - Inflammatory Mediators

- Special cells
 - Leucocyte
 - Endothelial cell
- Special molecules
 - Reactive Oxygen Species
 - Inflammatory Mediators
 - Cytokines (pro, anti and mixed effect)

Inflammatory Mediators - PAF

PAF

- DAE
- LTB4
- C5
- Thrombin

- Membrane phospholipid, platelets
- Hypoxia stimulates Leucocyte PAF release
- Leucocyte PAF receptor
 - Increased expression CD11/CD18
 - Generation of oxygen free radicals
 - Release of lactoferrin, myeloperoxidase

Inflammatory Mediators - LTB4

LTB4 (SRS-A)

- Metabolite of Arachadinoic Acid
- Lipo-oxygenase pathway
- Chemoattractant
- Increased adhesion/transmigration
- Promotes leucocyte to release;
 - Oxygen radicals
 - Proteolytic enzymes

- PAF
- LTB4
- C5
- Thrombin

Organism response to stress - Cytokines

- Special cells
 - Leucocyte
 - Endothelial cell
- Special molecules
 - Reactive Oxygen Species
 - Inflammatory Mediators
 - Cytokines (pro, anti and mixed effect)

Cytokines - Pro Inflammatory - IL-1

Pro Inflammatory

- |<u>L</u>-
- Inflammatory
- IL-2

- Anti-
 - Inflammatory IL-6
- Mixed

- IL-8
- TNF- α

IL-1

- One of main mediators (with TNF-lpha) of septic shock
- Effects blocked by IL
 1ra

Cytokines - Pro Inflammatory - IL-2

Pro Inflammatory

- Pro-
 - Inflammatory
- Anti-Infammatory
- Mixed

- IL-1
- IL-2
- IL-6
- IL-8
- TNF- α

IL-2

- T-cell
- Activation of T, B and NK cells
- Tried in Melanoma and Renal Cell Carcinoma (Vascular Leak Syndrome)

Cytokines - Anti Inflammatory - IL-10

Anti Inflammatory

Pro-

Inflammatory | IL-4

Anti-

nfammatory • IL-10

Mixed

IL-13

IL-10

IL-10 has been shown to protect mice from the effects of endotoxic shock

Cytokines - Mixed Effect

Anti TGF- β

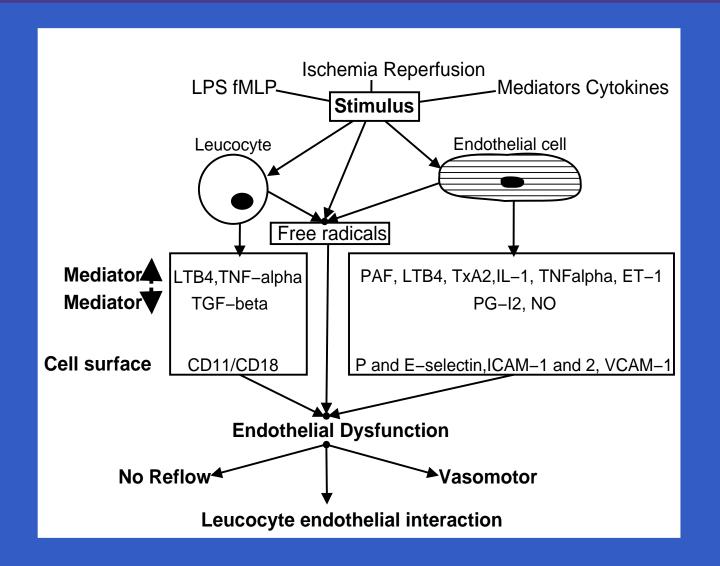

- Pro-Inflammatory
- Anti-Inflammatory
- Mixed

- Decreased productions monokines and lymphokines
- Reduced IL-1, IL-6 and TNF-lpha

Pro TGF- β

Chemo-attractant

Final Common Pathway

SIRS - Clinical Stages

Clinical Stages 1 – 3

- 1. Local response
- 2. Spill over of cytokines into the circulation, but balance maintained
- 3. Massive proinflammatory swing;
 - Vasodilatation
 - Leaky capilleries
 - Myocardial dysfunction

Monitoring SIRS

Sepsis Markers

- WCC
- CRP
- Pro-calcitonin
- IL-6
- IL-10
- Endotoxin
- Protein-C

Role is unclear

Treatment of SIRS

Specific SIRS treatment

- Treat cause,remove source
- Support in ICU
- Specific SIRS treatment

- Enteral feeding
- Immuno-nutrition (Glutamine, omega-3, nucleotide rich)
- rAPC (Xirgis)
- G-CSF
- Anti-inflammatory Cytokines

SIRS and enteral feeding

- Increased nutritional needs
- Gastro-intestinal Blood barrier
- Alterations in normal gut flora
- Blunt catabolic response
- Bolster immune defences

2-fold decrease in infectious complications in patients fed enterally instead of parenterally

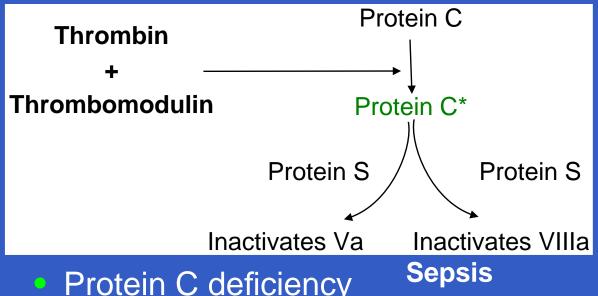

Ann Surg 216:172-183, 1992

Glutamine

- Glutamine in demand in inflammation
- Enterocytes need glutamine
- (Parenteral) Improves Nitrogen Balance
- (Parenteral) Reduces hospital Stay
- 30% studies show clinical benefit

Role of additional glutamine is probably beneficial but small

Activated Protein C - What it does

Natural anticoagulant

- Protein C deficiency
- Protein S deficiency
- APC resistance
- Factor V Leiden

- Clotting
- **D-Dimers**
- **FDP**
- Protein C consumption

Activated Protein C - PROWESS RCT

- Recombinant human activated protein C *Drotrecogin* alfa
- 634 patients received drug, 637 received placebo

Group	Mortality (28 d)
Protein C	26.5 %
Placebo	33.9 %

Cost to save one life is about 160,000 Euro

Int Care Med 29(6):894-903, Jun 2003
